

IN THE SPECIFICATION

Please replace the paragraph at page 1, lines 16-21, with the following rewritten paragraph:

The type of printing medium has effect not only on the color [[r]] reproducibility of ink, but also on precision of feeding printing medium (referred to as “paper feed” hereinafter). For example, paper feed operation for a printing medium with a slippery surface and the same operation for a printing medium with an unslippery surface may sometimes result inconsiderably different actual feed amounts.
